## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 19,23-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 102***

Claims 1,2,4,5,7-9, 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Tirschler '841. This patent discloses the basic process and apparatus of detecting a frozen charge in a tube mill and stopping the mill so that the charge can be removed. This meets the subject matter of these claims as broadly claimed by applicants. For example, claim 1 states that the speed of rotation is varied to detach the frozen material. This broad process step reads on the frozen material being detected, the mill stopped, and the charge removed which is what is disclosed in the patent.

### ***Claim Rejections - 35 USC § 103***

Claims 3,6,10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tirschler '841. Wetting material to help move it is well within the scope of one skilled in the art and of no patentable merit. Also, the use of converters and ring motors is well known in the mechanical arts and of no patentable merit. Modifying Tirschler by providing such apparatus would have been well within the scope of one skilled in the art.

### ***Claim Rejections - 35 USC § 112***

Claims 11-17,20,21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The term 'offset' is not found anywhere in the original disclosure. It is not clear from the disclosure what applicant is trying to claim with using the word 'offset'.

### ***Response to Arguments***

Applicant's arguments filed 5/26/10 concerning the rejections set forth above have been fully considered but they are not persuasive. It is first noted that newly submitted claim 22 does not contain all of the allowable subject matter of claim 19 and therefore is not allowable as argued by applicant. Claim 22 does not include the 'varying' step of claim 1 which is part of claim 19.

The arguments against Tirschler '841 are just not commensurate in scope with the claimed subject matter. As noted above, stoppage of the patent machine is in effect varying the rotational speed of the drum and this stoppage in effect causes the frozen charge to detach from the drum wall since stoppage of the drum allows for a manual separation of the frozen charge. The language used by applicant does not overcome this interpretation of the reference by the examiner.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP
